Proxy: C#.Net

➢ The proxy for C#.net is an assembly you can include in your .net applications which makes it very easy to powerfully manage your BLKQCL device.

➢ See the provided Samples for more information.

➢ You may construct the .net proxy with:

➢ Proxy(string url, Proxy.Authentication authentication = null, string ns = "automatic");
    For example:
       BLKQCL_Proxy.Proxy p = new BLKQCL_Proxy.Proxy(url);

➢ The proxy contains these methods defined in the ../BLKQCL-SDK-API-Reference.pdf:
    o MoveTune
    o StepTune
    o SweepTune
    o StepScan
    o SweepScan
    o InterleavedScan
    o StepLasers
    o GetUserSettings
    o SetUserSettings
    o GetFactorySettings
    o GetAlarms
    o ClearAlarms
    o ReadSensors
